mongo DB with get data example

first we have to Import module
express

then we have to Import module
mongo Db

→ then we can turn into executable
express mode

→ then store url mongo db

→ And then connect to client

→ and then create a function

→ then connect with client

→ then connect with db database

→ then connect with collection

→ then express Js has get method & method these

→ then call function inside get method

→ Then call function find()

→ and then send data)

Only get example function

```
app.get('/', (res, req) => {
```

```
  let result = await dbconnect()
```

```
  data: await result.find().toArray()
```

```
  console.
```

```
    req.send('data')
```

```
})
```

this is for get data from
data base
