→ how to insert data into data base by node j's.

→ insert into collection

→ to insert a record. Or document as it is called in mongoDB, into a collection, we use the insertone () method

Practicle example for insert an element

app. get ('1', asyn(nep, seps)=> {

let check = await dbconnect ()

let checks = check . insertone ($ $)

by using this function we can insert data by node js into a data base

let checkss= ehwait checks find()

```
res.send(checkss);
3)
app.listen(3500)
```
